New Delhi

Design & install of 2 world-class TigerTurf tennis courts.

Date of Project Completion : February 2019.

Surface: ITF certified Advantage Pro

Base Construction: Concrete

Size: 16280 sq.ft.

The client had been originally approached in 2014 with the prospect of TigerTurf synthetic turf tennis courts and it finally came through in 2018 – an excellent choice nonetheless!

Our original CAD had the playing area in blue and non-playing area in green. This production, that was slated for our TigerTurf New Zealand plant was shifted to the TigerTurf UK plant owing to non-availability of the blue yarn considering the timeline in which the product had to be completed. So, while the high-quality tennis nets were being shipped from New Zealand, the turf was being manufactured at Kidderminster, UK.

In the meantime, our installation team removed the existing court, did repair-work on the concrete base and made arrangements for installation to take place the moment the goods arrived. All-in-all, it was a well-time all-round effort that

ensured that the project was completed before its scheduled time.

The Advantage Pro TigerTurf is an extremely hard-wearing, medium-pile, polyethylene texturized monofilament yarn. Its exclusive fibre type encapsulates more of the sand infill producing a surface that is far less sandy in appearance. Of course, not to mention (that) all our yarns are heavy metal free and UV stable.

This ITF – Medium/Fast certified product is perhaps the best turf in its category and with correct and fair usage, its warranty extends to 10 years.
